Scarbo - Business Processes for SOA

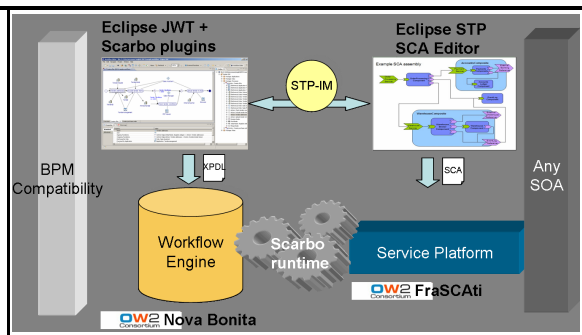

Scarbo is an **open, complete, SOA ready, SCA powered, OW2 and Eclipse-based BPM solution** (modeler + engine + console). [Try it](#), or [see it in action](#).

Why Scarbo ?

Scarbo aims to prove, using SCA, that Open Source, BPM and SOA are a match in heaven that solves traditional BPM pitfalls, and brings together orchestration and workflow paradigms. See more about [Why Scarbo](#).

What does it consist in ?

It builds on top of the [Eclipse JWT](#) generic workflow tooling suite; [Bonita 4](#) workflow engine and the SCA-implementing [OW2 FraSCaTi](#) service platform. It is actually the implementation of the "JWT for SOA" vision that uses the Scarbo platform as its runtime, and therefore a good JWT integration showcase as well. See more about its [Features](#) or its [Architecture](#).

Who makes it ?

Scarbo is developed and maintained by [Open Wide](#), with contributions from its partners and funding from its clients. It originated in the [SCOrWare](#) research project thanks to funding by the [Agence Nationale de la Recherche](#). See more at [the full credit list](#).
